

**4-way cassette type fan coil unit
(drain pump inside)**

Characteristic

1、4-way air flowing, which can uniform temperature distribution in the room

2、Thin design unit which can be installed in a limit ceiling (the Min. thickness is 260mm)

3、Easy to be installed, Low installation cost

Comparing to the ceiling conceal ducted FCU, we do not need to install the air inlet and outlet, and also the ducted connection and insulation.

4、Remote controller is standard and wire controller is optional

5、Auto swing

Using advanced 3D software to design the centrifugal fan with streamline and big diameter turbine.

6、Quiet running

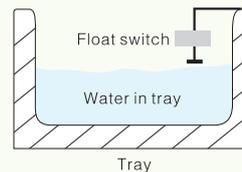

The efficiency of airflow rate, heavy wind volume and low noise is excellent. Because the ventilator wheel is processed to sine strip seam, which enhances its flexibility, and drops the vibration of ventilator during revolving in large scale, simultaneously reduced the motor noise caused by ventilator swinging.

7、High lift water drained pump (750mm), easy to plan the condensate drained pipe

8、Float switch inside to prevent from leaking

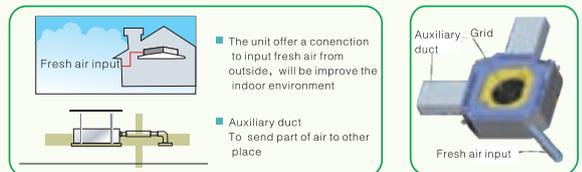

After the water raising to a certainly position, the float switch will act and alarm, then the unit will cut off the water valve or stop the fan motor.

9、Fresh air can be inputed from outside

Fresh air inlet can import some fresh wind from outside, and ensure the quality of indoor air.

Thus, the consumer can share the fresh and clean air to lessen illness caused by air condition.

10、Auxiliary duct is available to send part of air to other place, in order to improve indoor temperature and air quality

11、Negative ion generator is optional

12、The water remain in the tray is easy to drained by manual.

There are a rubber plug on the water collecting tray, we can drained out the dirty water by manual.

Because the water remained inside the tray will keep for a long time, then there will be very dirty and there might be lots bacterial inside too, draining out the dirty water is benefit to the health and also reduce the possible of pump blocking.

13、Griall is optional to prevent from hand injury

14、“C” type heat exchanger, blue fin

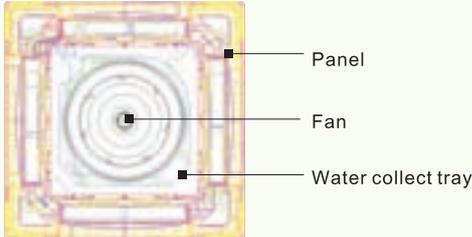

“C” type exchanger is helpful to improve the well-distributed of terminal air duct and refrigerate system, make the efficiency of multi flow more even and it reduced the probable of system leak.

Blue fin extremely reduced the coagulate water detained in the aluminum flake, so it reduce the wind resistance, improved the efficiency of heat exchanger.

15、 Fan and fan motor is easy to maintain

After take out the air grid of the panel, we can easily take out the electric box, then the fan and fan motor can be easily taken out too.

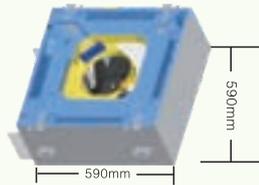

16、 Square panels ,which can choose the direction of inlet/outlet water connection freely

17、 Corner cover design makes installation and maintain conveniently.

18、 The dimension of E1 unit is only 590×590mm, which can be installed in a standard ceiling opening.

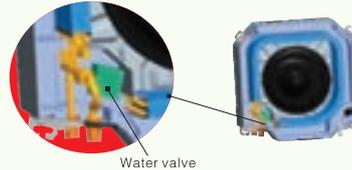

19、 Easily interfaced with most widely used BMS and proprietary supervisory system based on mod Bus protocol.

20、 Water valve can be installed inside the unit(optional).

Water valve is used to control the on/off water flowing to the unit, we installed the valve into the unit, so the user do not need to installed it by themself.

21、 Stainless steel hose can be installed to the unit and act as the inlet/outlet water connection of the unit(optional)

Stainless steel hose is used to reduce the concussion of water pipe ,big concussion will cause to broken and leaking.

we installed the stainless steel hose inside the unit, so the user do not need to install it again.

The pre-installed hose reduce also the leaking possible

22、 4-tube system is optional

There are both cooling and heating water circle coil inside the unit, so the unit can deal with cooling or heating at the same time.

4pipe systme is always used in the place where need to deal with heating and cooling by refrigeration system at the same time. For example, a room need heating and another need cooling. 5-star hotel always use this kinds FCU.

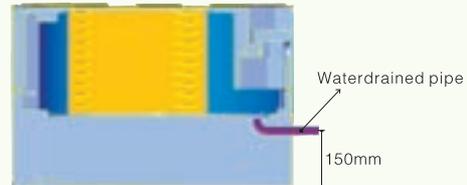

Characteristic

- 1、 Drained by nature, running stable because without water pump, P.C.B which is easy to damaged
- 2、 4-way air flowing, which can uniform temperature distribution in the room
- 3、 Easy to be installed, Low installation cost

Comparing to the ceiling conceal ducted FCU, we do not need to install the air inlet and outlet, and also the ducted connection and insulation.

4、 150mm drained dropping, drain water quickly.

4-way cassette type fan coil unit (without drain pump)

- 5、 Quiet running
- 6、 The air flowing direction can be change by adjust the air guide bar
- 7、 Autoswing function and remote controller is optional after install the P.C.B system
- 8、 Fresh air can be input from outdoor to better indoor air quality
- 9、 Griall is optional to prevent from hand injury
- 10、 Fan and fan motor is easy to maintain
- 11、 Square panels ,which can choose the direction of inlet/outlet water connection freely
- 12、 Corner cover design makes installation and maintian coveniently.
- 13、 The dimension of E1 unit is only 590×590mm, which can be installed in a standard ceiling opening.
- 14、 Stainless steel hose can be installed as inlet/outlet water connection(optional)

15、 Matching nano-photocatalyst cleaning device(optional)

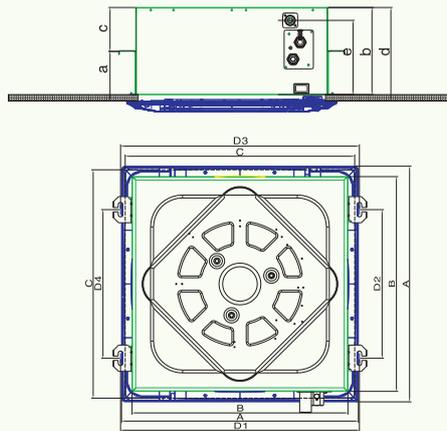

Efficient use of nano-TiO2 Photocatalyst purification, with the degradation of chemical pollution Stained strong capacity, including formaldehyde, benzene degradation rate in one hour reached 71%, 90 minutes to kill the natural flora percentage rate of 83 or more;

The use of advanced photocatalysis can use non-UV light source, thus avoiding hidden dangers caused by ultraviolet radiation leakage;

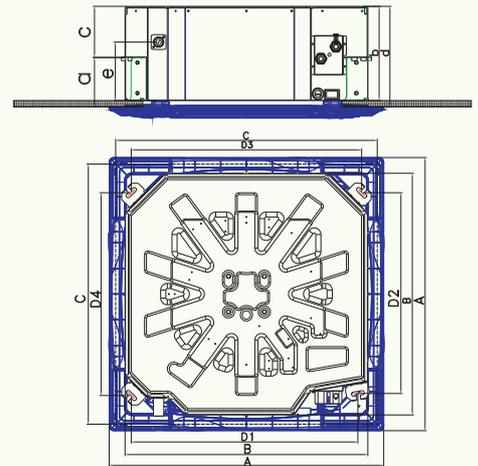

16、 4-tube system is optional

'K' style

4-way cassette type fan coil unit (drain pump inside)

Characteristic

1、4-way air flowing, which can uniform temperature distribution in the room

2、Thin design unit which can be installed in a limit ceiling (the Min. thickness is 260mm)

3、Easy to be installed, Low installation cost

Comparing to the ceiling conceal ducted FCU, we do not need to install the air inlet and outlet, and also the ducted connection and insulation.

4、Remote controller is standard and wire controller is optional

5、Auto swing

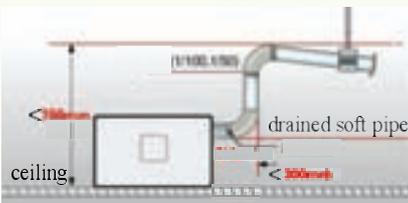

Using advanced 3D software to design the centrifugal fan with streamline and big diameter turbine.

6、Quiet running

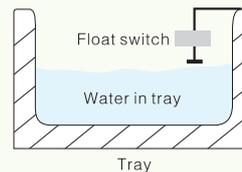

The efficiency of airflow rate, heavy wind volume and low noise is excellent. Because the ventilator wheel is processed to sine strip seam, which enhances its flexibility, and drops the vibration of ventilator during revolving in large scale, simultaneously reduced the motor noise caused by ventilator swinging.

7、High lift water drained pump (750mm), easy to plan the condensate drained pipe

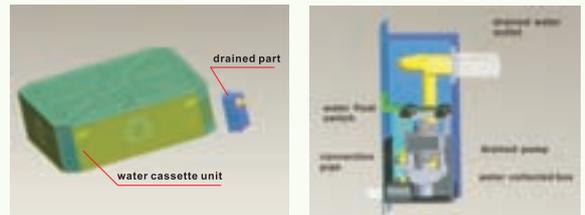

8、Float switch inside to prevent from leaking

After the water raising to a certainly position, the float switch will act and alarm, then the unit will cut off the water valve or stop the fan motor.

9、External drained part is optional

A external drained part can be connected to the drained tray, so it is very easy to change a damaged drained pump or float switch.

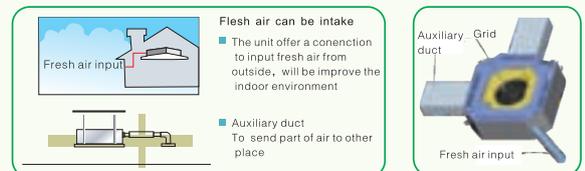

We need only to pull the part out and install a new one, it is so easy that we do not need to open the panel.

While it is very difficult when a pump is installed in a traditional unit. We need remove the panel, then remove the electric box, and remove the tray, the last we can do maintain, after maintain we need to install all parts back the unit, it will cost lots time.

10、Fresh air can be input from outside

Fresh air inlet can import some fresh wind from outside, and ensure the quality of indoor air.

Thus, the consumer can share the fresh and clean air to lessen illness caused by air condition

11、Auxiliary duct is available to send part of air to other place, in order to improve indoor temperature/air quality

12、Negative ion generator is optional

13、Griall is optional to prevent from hand injury

14. The water remain in the tray is easy to drained by manual.

There are a rubber plug on the water collecting tray, we can drained out the dirty water by manual.
Because the water remained inside the tray will keep for a long time, then there will be very dirty and there might be lots bacterial inside too, draining out the dirty water is benefit to the health and also reduce the possible of pump blocking.

15. "C" type heat exchanger, blue fin

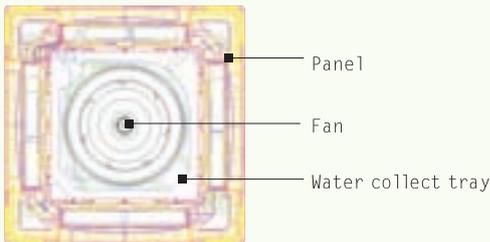

"C" type exchanger is helpful to improve the well-distributed of terminal air duct and refrigerate system, make the efficiency of multi flow more even and it reduced the probable of system leak.

Blue fin extremely reduced the coagulate water detained in the aluminum flake, so it reduce the wind resistance, improved the efficiency of heat exchanger.

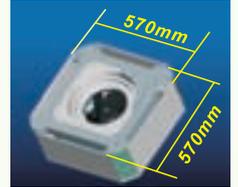

16. Fan and fan motor is easy to maintain

After take out the air grid of the panel, we can easily take out the electric box, then the fan and fan motor can be easily taken out too.

17. Square panels, which can choose the direction of inlet/outlet water connection freely

18. The dimension of K1 unit is only 570x570mm, which can be installed in a standard ceiling opening.

19. Easily interfaced with most widely used BMS and proprietary supervisory system based on mod Bus protocol.

20. Water valve can be installed outside the unit(optional).

Water valve is used to control the on/off water flowing to the unit, we installed the valve outside the unit, so the user do not need to installed it by themselves.

21. 4-tube system is optional

There are both cooling and heating water circle coil inside the unit, so the unit can deal with cooling or heating at the same time.

4pipe system is always used in the place where need to deal with heating and cooling by refrigeration system at the same time. For example, a room need heating and another need cooling. 5-star hotel always use this kinds FCU.

4-way cassette type fan coil unit (without drain pump)

'K' style

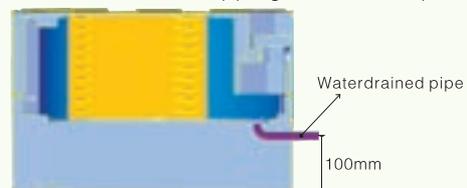

Characteristic

1. Drained by nature, running stable because without water pump, P.C.B which is easy to damaged
2. 4-way air flowing, which can uniform temperature distribution in the room
3. Easy to be installed, Low installation cost

Comparing to the ceiling conceal ducted FCU, we do not need to install the air inlet and outlet, and also the ducted connection and insulation.

4. 100mm drained dropping, drain water quickly.

- 5、Quiet running
- 6、The air flowing direction can be change by adjust the air guide bar
- 7、Autoswing function and remote controller is optional after install the P.C.B system
- 8、Fresh air can be input from outdoor to better indoor air quality
- 9、Griall is optional to prevent from hand injury
- 10、Fan and fan motor is easy to maintain
- 11、Square panels ,which can choose the direction of inlet/outlet water connection freely

4-way cassette fcu performance (4 tube system)

**8-way cassette type fan coil unit
(drain pump inside)**

Characteristic

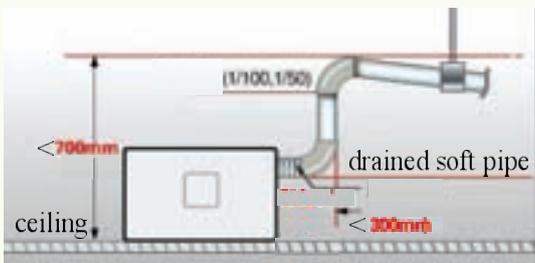

- 1、Surround Air flowing (8-way), there wind can arrive every where in the room

- 2、Fashion designs, the panel is beautiful and elegant
- 3、Thin design unit which can be installed in a limit ceiling (the Min. thickness is 240mm)
- 4、Remote controller is standard and wire controller is optional

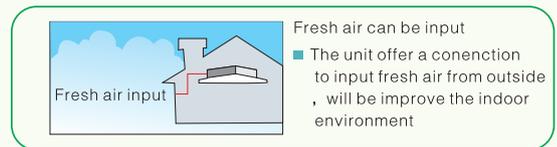

- 5、Quiet running
Because adopt bigger diameter fan,we can reduce the running speed of the fan, which will cause to lower noise.
- 6、High lift water drained pump (750mm),easy to plan the Condensate drained pipe

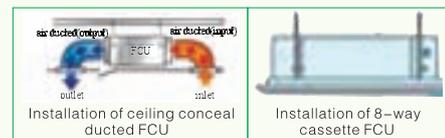

- 7、Auto swing
- 8、Float switch inside to prevent from leaking

- 9、Fresh air can be inputed from outside

- 10、Negative ion generator is optional
- 11、The water remain in the tray is easy to drained by manual.
There are a rubber plug on the water collecting tray,we can drained out the dirty water by manual.
Because the water remained inside the tray will keep for a long time, then there will be very dirty and there might be lots bacterial inside too,draining out the dirty water is benefit to the health and also reduce the possible of pump blocking.
- 12、Easy to be installed, Low installation cost

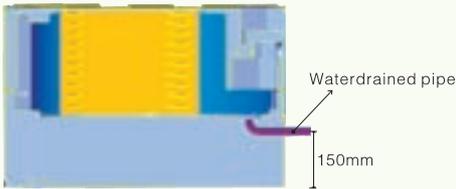

- 13、Fan and fan motor is easy to maintain
- 14、Square panels ,which can choose the direction of inlet/outlet water connection freely
- 15、Corner cover design makes installation and maintian conveniently.
- 16、The dimension of G1 unit is only 570×570, which can be installed in a standard ceiling opening.
- 17、Easily interfaced with most widely used BMS and proprietary supervisory system based on mod Bus protocol.

- 18、Water valve can be installed inside the unit(optional).
- 19、Stainless steel hose can be installed to the unit and act as the inlet/outlet water connection of the unit(optional)
- 20、4-tube system is optional

Characteristic (8-way cassette FCU without drained pump)

1. Surround Air flowing (8-way), there wind can arrive every where in the room
2. Fashion designs, the panel is beautiful and elegant
3. The air flowing direction can be change by adjust the air guide bar
4. 150mm drained dropping, drain water quickly.

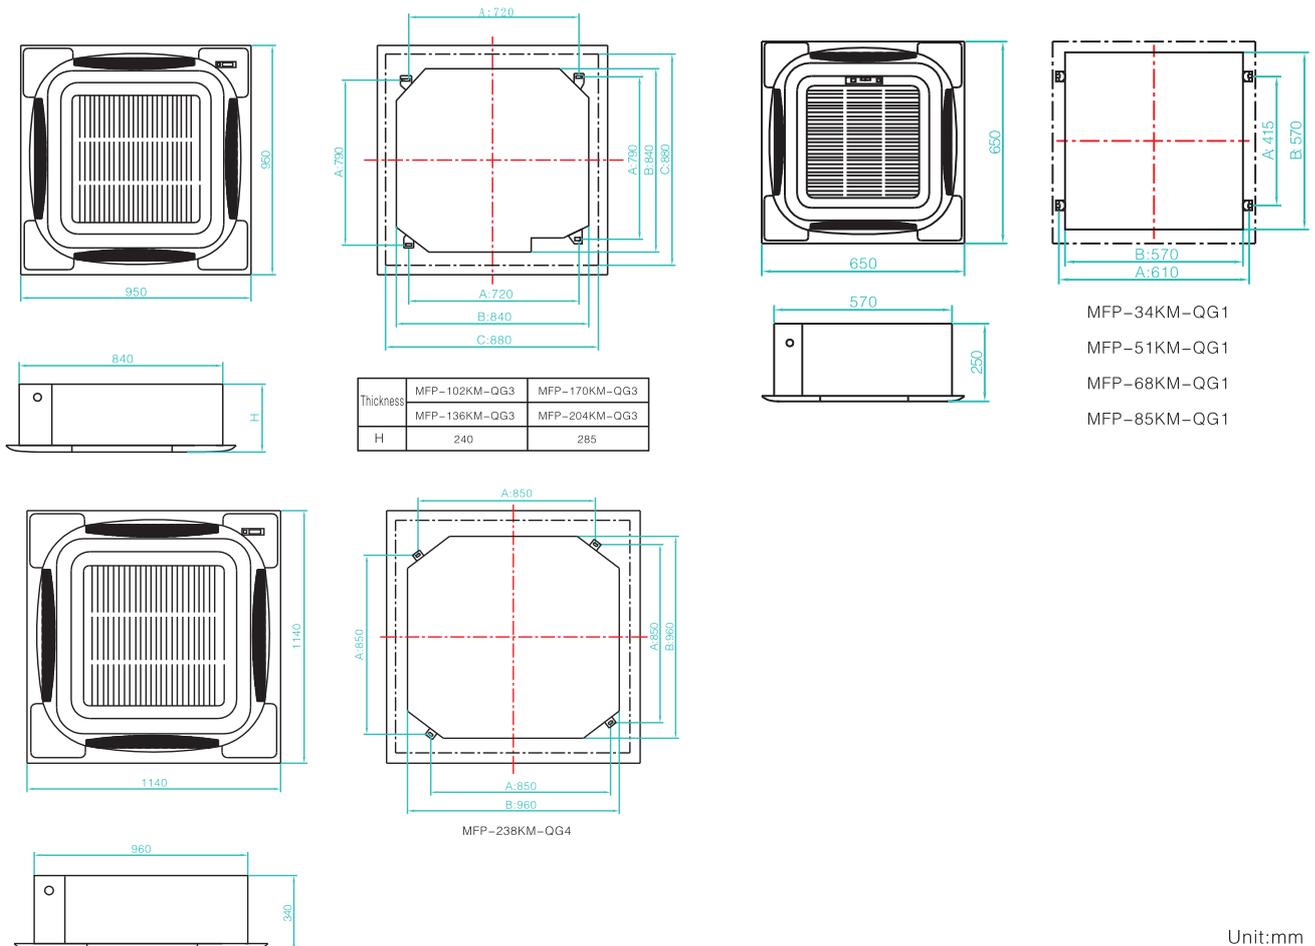

5. Quiet running

Because adopt bigger diameter fan, we can reduce the running speed of the fan, which will cause to lower noise.

6. Fresh air can be inputed from outside
7. Easy to be installed, Low installation cost
8. Fan and fan motor is easy to maintain
9. Square panels ,which can choose the direction of inlet/outlet water connection freely
10. Corner cover design makes installation and maintian conveniently.
11. The dimension of G1 unit is only 570×570, which can be installed in a standard ceiling opening.
11. Stainless steel hose can be installed to the unit and act as the inlet/outlet water connection of the unit(optional)
13. 4-tube system is optional
